EDUCATION

Kwame Nkrumah University of Science and Technology - Kumasi, Ghana

Expected Graduation: May 2029

Major: BSc Computer Engineering

CWA: 88.00

Relevant Coursework: Network Theory, Digital Electronics, Data Structures and Algorithms, Linear Algebra
Object-Oriented Programming, Software Engineering, Signals and Systems, Electronic Circuits, Semiconductor Devices

TECHNICAL SKILLS

Programming Languages & Tools: Java, Python, TypeScript, C/C++, Git, CSS, HTML, C#, System Verilog

Worked with: Raspberry Pi, Bootstrap, PostgreSQL, APIs, React, Chakra UI, Storybook, Github, Bitbucket

EXPERIENCE

Software Engineering & Program Management Intern, *Microsoft Corporation*

May 2024 - Aug 2024

- Collaborated with two fellow interns to develop an activities and history tracking feature for Xbox game publishers
- Co-authored both project management and technical specifications to streamline development
- Built core functionality using React, TypeScript, and C#, enabling publishers to track changes and receive system notifications

PROJECTS

The Buzz App | *Java, React, Flutter, PostgreSQL*

- Led a cross-functional team of four to build a mobile and web social media application with Java, React, and Flutter
- Enhanced user security by implementing OAuth2 with Google IDs to ensure robust authentication and safeguard user data
- Ensured code reliability through rigorous testing protocols, including unit tests
- Deployed application on Dokku for scalable cloud hosting

Smart Parking System | *HTML, Javascript, CSS, TinkerCAD, SolidWorks*

- Led a team to integrate web development with IoT sensors and mechanical design for a smart parking solution
- Developed a responsive parking reservation web app with spot availability and booking functionality
- Built dynamic pricing system with real-time cost calculations and checkout summary display

Gamify | *React, Chakra UI*

- Built a video game discovery platform with React and Chakra UI
- Integrated the RAWG API to fuel the platform with real game data, genres, and visuals
- Implemented search and sorting functionalities to streamline game discovery

Robot Control | *Python*

- Configured a functional robot using CamJam EduKit 3 and a Raspberry Pi
- Utilized Python programming language to control the robot's movements, effectively leveraging the *gpiozero* and *time* modules to manipulate its actions and responses

CAMPUS INVOLVEMENT

ACES Robotics
Cursor Community

January 2026 - Present
March 2026 - Present
